

Muhammad Mujeeb Ur Rahman

AI Engineer

Peshawar, KPK, Pakistan | +92 3121958257 | mujeebadwan1155@gmail.com | [LinkedIn](#) | [Github](#)

SUMMARY

AI Engineer and Software Engineering student specialised in machine learning, deep learning, and generative AI systems. Experienced in designing end-to-end AI solutions, including recommendation systems, NLP models, computer vision applications, and LLM-powered agents. Skilled in LangChain, LangGraph, RAG pipelines, vector databases, and workflow automation with n8n for building intelligent AI agents and automated systems. Industry experience includes working as a Generative and Agentic AI Engineer intern at NCAI Peshawar and completing Machine Learning and data science internships focused on real-world data analysis and ML model development. Strong foundation in Python, data science, and scalable AI system design.

WORK EXPERIENCE

Agentic AI Engineer Intern – NCAI, UET Peshawar

Dec 2025 – Feb 2026

- Working on AI-based projects using LLMs, LangChain, and RAG pipelines.
- Building Agents, automation workflows using N8N for chatbots and backend processes.
- Developing and improving AI chat systems, and smart assistants.
- Gaining practical experience in APIs, vector databases, and real-world AI applications.

Data Sciene Intern – ITSOLERA

July 2025 - Aug 2025

- Performed data preprocessing, cleaning, and EDA for real-world business datasets.
- Developed and evaluated ML models for predictive analysis and classification tasks.
- Built and optimized deep learning architectures including CNNs and recommendation systems.
- Deployed models using Streamlit and collaborated on debugging, documentation, and performance improvement.

PROJECTS

Emotion Detection using CNN (From Scratch)

- Designed and implemented a **Convolutional Neural Network (CNN)** from scratch to classify human facial emotions from images.
- Performed **image preprocessing, normalization, and data augmentation** to improve model generalization and reduce overfitting.
- Trained and evaluated the model using **TensorFlow/Keras**, achieving reliable performance on multi-class emotion classification.
- Built an inference pipeline capable of predicting emotions from unseen facial images for real-time or batch analysis.

RAG Chatbot for CISNR – Intelligent Document QA System

- Developed an intelligent document question-answering system to solve the challenge of extracting accurate information from large and unstructured Word documents.
- Implemented a complete Retrieval-Augmented Generation (RAG) pipeline with a custom Word file loader, text chunking, embeddings, and ChromaDB vector storage, using a modular multi-file architecture with separate services for LLMs, embeddings, and vector database operations.
- Improved answer accuracy and reliability by adding query understanding and context-scoring logic, ensuring precise, source-grounded responses for end users.

Movies Recommendation System (End-to-End ML Project)

- Developed a movie recommendation system using **content-based filtering and similarity-based recommendation algorithms**.
- Performed **data preprocessing, feature extraction, and vectorization** using Python libraries such as Pandas and Scikit-learn.
- Implemented a recommendation engine that suggests similar movies based on user-selected titles.
- Built and deployed an interactive **Streamlit web application** to deliver real-time movie recommendations to users.

EDUCATION

BS Software Engineering

Nov 2023 – Present

University of Malakand (UOM), Malakand, KPK, Pakistan

CGPA: 3.75

SKILLS

LLM & AI Frameworks:	LLMs, LangChain, LangGraph, RAG Pipelines, Vector Databases, AI Agents, n8n Automation
AI & Machine Learning:	Machine Learning, Deep Learning, NLP, Computer Vision, Recommendation Systems
Databases:	PostgreSQL, MongoDB, Firebase, ChromaDB, Pinecone
Programming:	Python, JavaScript, C++
Other Skills / Tools:	Git, GitHub, API Integration

ADDITIONAL INFORMATION

Languages: Urdu, English, Arabic, Pashto

Certifications: IBM AI Certificates (EDA, Supervised, Unsupervised, etc.)
